Spring 2013

BIOL 4450A
Senior Seminar

Prof. Julia Kubanek
Office: Environmental Science and Technology building room 2242
julia.kubanek@biology.gatech.edu

Course summary: Biology students present seminars on recent research topics based on their own research experience and literature research. This course will be structured similarly to an academic lab meeting, where effective participation and the ability to provide constructive criticism to your colleagues are fundamental. The objectives for the course are for students to

- develop oral and poster presentation skills on your own research
- learn to engage an audience in a scientific topic through presentation
- critically present and discuss your research results
- put your biological findings in a broader scientific context

These skills can be applied in a variety of possible future careers including: business (convincing supervisors of a new project idea, delivering results from a pilot project or clinical trial), medicine (informing colleagues about a medical case, teaching colleagues about a new treatment), government (testifying before elected officials about the importance of a research area, negotiating with bureaucrats about funding for science or education), and academia (presenting your own research in a faculty seminar or job interview, delivering a presentation at an international conference). We will also discuss strategies and techniques for scientific writing and interacting with other scientists in formal and informal meetings and conferences.

Pre- and Co-requisites: BIOL 4450 is a co-requisite for BIOL 4590 (Research Project Lab) because students will present their research from BIOL 4590 in the Senior Seminar course. Students who have chosen to take BIOL 4690 (Independent Research Project) or BIOL 4910 (Honors Research Thesis) as their Senior Research Experience will present their research from BIOL 4690/4910 in Senior Seminar, and may enroll in BIOL 4450 concurrently or after completion of BIOL 4690/4910.

Format: BIOL 4450A meets on Tuesdays from 4:05-5:25 pm in Howey Physics building room S107. Because this is a presentation and discussion-based course, attendance and active participation are required. Thus you must have a legitimately excusable absence if you miss class. Examples of excusable absences include documented illness, death in the family, accident, and sanctioned Institute events. If you know that you are going to be absent from a class, you must let the instructor know ahead of time. Each unexcused absence will lower the final grade by 5%.

Office hours: By appointment. Please email or consult with instructor during class to set up a meeting. Students are also welcome to visit the instructor to talk about issues other than course material (e.g., career plans, research interests).
Assessment:
Mini oral presentation 10%
Major oral presentations 40%
Self assessment of presentation 10%
Poster presentation 25%
Class participation 15%

Oral presentations should include use of PowerPoint (or similar) files, should be practiced ahead of time, and will be peer-reviewed and graded by the instructor according to the rubric included with this syllabus. Mini oral presentations (6 min) may be on a scientific topic of your choosing or framed around a recent primary literature journal article. Major oral presentations (12 min) will be based on your research from BIOL 4590, 4690, or 4910.

Self assessment: Students complete an evaluation of their own major oral presentations, due one week after the presentation. This provides an opportunity for students to reflect on how they could have prepared for, practiced, and structured their talks differently, and what they would change for their next presentation.

Poster presentation: Each student will create a poster to present their research (from BIOL 4590, 4690, or 4910) in a poster session held at the end of the semester. The poster format is described at the end of this syllabus will be further discussed in class during Week 9. The grading rubric is provided with this syllabus.

Class participation: Students will be judged by the extent to which they participate in class discussions (by asking questions, answering questions, offering ideas, opinions, and critiques of student presentations). Students are expected to ask a question or offer a comment at least once every class.

Academic Integrity: Academic dishonesty will not be tolerated. This includes cheating, lying about course matters, plagiarism, stealing classroom materials, or helping others commit a violation of the Honor Code. Students are reminded of the obligations and expectations associated with the Georgia Tech Academic Honor Code and Student Code of Conduct, available online at www.honor.gatech.edu. Plagiarism includes reprinting the words of others without both the use of quotation marks and citation. As direct quotes are seldom used in scientific writing, you are expected to rephrase the words of others and provide the citation. If this is unclear, please ask your instructor for help.

Learning Accommodations: If needed, we will make classroom accommodations for students with documented disabilities. These accommodations must be arranged in advance and in accordance with the ADAPTS office (http://www.adapts.gatech.edu).
**Class calendar:**

**Spring 2013**
ORAL PRESENTATION GRADING RUBRIC
BIOL 4450A

The scoring system is as follows: 4 - excellent, 3 - good, 2 - fair, 1 - needs considerable improvement.

1. The talk was well presented because the speaker: (28 pts)
   a. projected enthusiasm and interest in the topic
   b. effectively controlled distracting behaviors
   c. used adequate speaking volume
   d. maintained eye contact with audience
   e. used visual aids effectively
   f. used notes sparingly
   g. answered questions adequately.

2. The content well-organized and clearly explained because the speaker: (32 pts)
   a. was easy to follow.
   b. presented adequate background to understand the topic.
   c. explained the methodology clearly.
   d. presented persuasive evidence.
   e. related own data to other studies/published literature.
   f. included citations within the presentation
   g. covered the topic adequately, considering time limitations.
   h. used appropriate pacing throughout talk & appropriate length

TOTAL: _______/ 60 points

COMMENTS:
Poster Guidelines

Content and layout will be discussed in class.

Formatting: To print using School of Biology resources, format your poster for 40" X 48" or smaller (36" X 48" is a nice working size). The poster boards provided for the poster session are 42"x48". Font sizes can vary, but a rule of thumb is title at 60 pt, Headers at 46 pt, text at 30-36 pt. Images should be mid- to high-resolution so they don't pixelate when printed.

Poster Submission: If you would like the School of Biology to print your poster, then your poster is due as a pdf, ppt, or pptx document by Friday, April 19th. If you plan to print your own poster, then you must still submit an electronic copy to the instructor by the time the poster session begins for grading purposes. Note that Senior Seminar posters are printed at no cost to the student when using the School of Biology printer. However, the School of Biology will not pay to have your poster printed elsewhere.

Poster Session: You are expected to arrive ~5-10 minutes early to set up your poster and to attend the entire session unless you have a scheduled class during part of the time (in which case, please consult with the instructor PRIOR to the day of the poster session). For most of that time you will need to stand near your poster to answer questions, but you should take the opportunity circulate and support your classmates by asking about their work. The School of Biology will provide refreshments and the faculty will visit you to hear about your research!

Presentation: Be prepared to tell a poster viewer your research story including the salient points of your poster (focusing especially on your results and their implications) in a practiced ~1–2 minute presentation. However, allow viewers who would prefer to read the content of your poster quietly to do so, and then ask them if they have any question for you to answer.

Grading: Your poster will be graded for content, formatting, and presentation by your senior seminar instructor.

Co-authorship: If you have student co-authors who are all registered in BIOL 4450 during the same semester, you may share a single poster, but each of you should be able to present independently. Each student will be graded using the rubric and standards of his or her senior seminar instructor.
POSTER GRADING RUBRIC

The scoring system is as follows: 4 - excellent, 3 - good, 2 - fair, or 1 - needs considerable improvement

1. The poster was well presented because the poster: (24 pts)
   a. was aesthetically pleasing, with a balance of text & graphics, etc. __________
   b. title was clear & inviting for a general biology audience __________
   c. referenced and acknowledged appropriate sources. __________
   d. presenter effectively explained the poster’s key points. __________
   e. presenter encouraged discussion and questions. __________
   f. presenter successfully answered questions. __________

2. The content was well organized and clearly explained because the poster: (28 pts)
   a. made the science easy to follow. __________
   b. presented adequate background to understand the topic. __________
   c. hypotheses were clearly stated. __________
   d. methodology presented was adequate to understand the results. __________
   e. presented data clearly in a readily understandable format. __________
   f. summarized and generalized the results. __________
   g. related the conclusions to the goals & hypotheses of the study. __________

TOTAL: __________ / 52 points
